operational potential

integrated management solutions for manufacturing from the unsultants

the power to improve front-line leaders' skills and productivity.

The quality of your P&L is a direct reflection of the quality of your front-line supervisors. By investing the time and training into improving their management skills, your entire manufacturing operation benefits. The Powers Company's *unsultants* work side-by-side with front-line leaders, rapidly establishing trust and credibility, which leads to substantive behavior and productivity change—much faster than traditional consultants or internal teams could achieve it. Most importantly, we implement a sustained improvement culture within your company that continues long after our engagement is done.

we can implement improvements across every phase of your operation

Supply
Chain

Warehouse

Scheduling

Production

Quality
Assurance

your top priorities are also our top priorities.

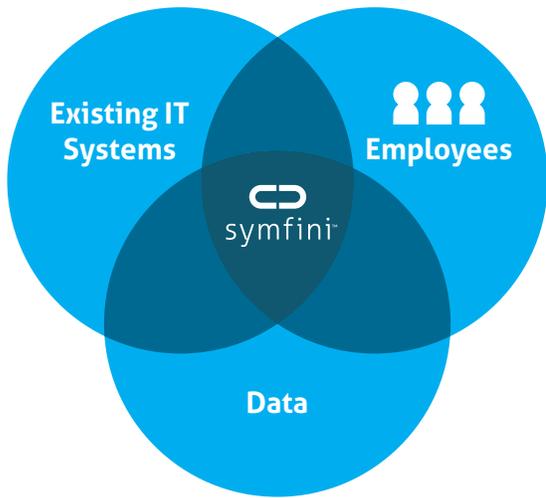

When you work with The Powers Company, our first step is learning about your culture, people, systems, and processes to see how the operation truly works and what your top challenges and priorities are. Then our unsultants develop a customized “game plan” in conjunction with your front-line team.

Here are a few ways we've helped other manufacturing companies:

- *Lower plant, supply chain, and labor costs*
- *Reduce cycle times, excess inventories and manufacturing errors*
- *Increase resource utilization and throughput*
- *Improve product quality and customer service*
- *Reduce manufacturing errors and rework*
- *Bring more scientific analysis to inventory planning process*
- *Increase consistency, predictability, and efficiency (CPE) throughout supply chain*

For a deeper dive into how we can help your supply chain, [click here](#).

unsilo your organization and start reducing cycle times.

Symfiniti, our Integrated Management System, can help eliminate operational silos and get all your departments in perfect harmony.

- *Integrates with your existing IT systems*
- *Doesn't require additional capital investment*
- *Helps software systems, employees, and data work together seamlessly*

anyone can promise great results. we actually deliver on it.

Talk only goes so far. At the end of an engagement, what matters is results. That's why we're proud to offer up some important numbers to consider.

Typical improvement in operating performance:

20%-30%

Traditional guarantee for clients:

3:1 ROI
(or better)

Want to see how that translates to a specific manufacturing industry assignment? How about a case study detailing one manufacturer's **\$2.1 million** in labor savings made through gains in standard-per-hour productivity.

some manufacturing companies that benefit from the power of us:

unleash your potential: contact the consultants.

When you engage The Powers Company, we'll conduct a two-to-three week analysis where we work with your personnel to identify operational, behavioral, and financial opportunities that exist.

Following the analysis, we'll:

- *Use your numbers to define opportunities for improvement.*
- *Specify the ROI and the cash flow improvements in writing.*
- *Guarantee a bottom line improvement that more than pays for the cost of our services.*
- *Work side-by-side with your team to implement improvements.*

Contact us to learn more about our manufacturing industry expertise and how we can help achieve your goals for operational improvement.
